EXPERIENCE:

University of Delaware - AskIT Help Desk

Newark, DE

Student Help Desk Assistant

Feb 2026 – Present

- Greet and deliver technical support to students and staff by diagnosing hardware issues and resolving software issues
- Manage and document service requests via the TeamDynamix ticketing system to ensure accurate and timely tracking
- Facilitate large-format printing services as well as equipment lending services, accurately monitoring job progress
- Support the onboarding of new students by setting up new devices, both Windows and Mac

University of Delaware - Sensify Lab

Newark, DE

Undergraduate Researcher

Feb 2025 – Present

- Explore relationship between energy usage and physical fitness to identify potential patterns
- Clean multi-survey data sets using Python and Google Colab in order to filter out unneeded information
- Debug frontend, backend, and database code to ensure seamless project performance by problem solving through issues

Web Developer & Graphic Designer

Dumont, NJ

The Traveling Roses

April 2018 - Present

- Design format for each blog post and create relevant SEOs for each page on the website
- Created a user-friendly website and logo, enhancing brand visibility and fostering a cohesive online identity.
- Work closely with the employer to refine design concepts, ensuring alignment with brand vision and client satisfaction.
- Develop a structured format for blog posts, improving content consistency and readability across the site.
- Provide ongoing design updates based on feedback, maintaining a flexible approach to meet evolving client needs.

PROJECTS:

On Your Own Terms

- Programmed a full-stack CRUD application where users exchange services to provide an option of care for the elderly
- Designed database model, coded appropriate prisma schema, and generated mock data to be seeded into the database
- Integrated Auth0 to authenticate and authorize users, enabling secure user login and blocking users feature
- Built a backend using NestJS, allowing for profile mutations

Hackathon Winner - Social Good Category, HenHacks 2024

- Won first place against 32 participants by developing a community-driven 2D game to help the environment within 24 hours
- Utilized the Pygame library to incentivize players to pick up litter by granting in-game upgrades to fight monsters as a reward for cleaning the community
